

# Math Mole

July 13, 2007

Last-Day, Sad-Day, Fri-Day

Volume 5, No. 5

## This issue

- Mathematician(s) of the Day
- No Puzzles
- No Spotlight
- Today's Editor: Dr. Collins

## Questions:

**One:** What time is it?

**Two:** What will the awards be and who will win them?

**Three:** What grade will you get?

**Four:** Finally, why no bones?

## Mathematician of the Day

Unknown Mathematician(s) of the Next Generation

- This person (or persons) were born sometime between 1989 and 1991.
- Their early life had the usual experiences and possibly some unusual ones.
- Their early mathematical training occurred at home or at school or at the foot of a master or by alien transfer.
- The beginning of their meteoric rise to the top of the mathematical field can be traced back to the Summer of 2007 in an experience called GSSE.
- This experience, although traumatic at times, sharpened their skills, honed their logical reasoning, and refined their powers of problem solving.
- What happened next is, well, a mystery. It's as if it hasn't happened yet. This editor can imagine great success for all.
