ERRATA

Abstract Algebra, Third Edition
by D. Dummit and R. Foote

(most recently revised on April 10, 2007)

These are errata for the Third Edition of the book. Errata from previous editions have been fixed in this edition so users of this edition do not need to refer to errata files for the Second Edition (on this web site). Individuals using the Second Edition, however, must make corrections from this list as well as those in the Second Edition errata files (except for corrections to text only needed in the Third Edition; for such text no reference to Second Edition page numbers is given below). Some of these corrections have already been incorporated into recent printings of the Third Edition.

Let $M$ be a left $\mathbb{Z}$-module and let $R$ be a ring with 1.
(a) Show that $\text{Hom}_\mathbb{Z}(R, M)$ is a left $R$-module under the action $(r\varphi)(r') = \varphi(r'r)$ (see Exercise 10).
(b) Suppose that $0 \rightarrow A \xrightarrow{\psi} B$ is an exact sequence of $R$-modules. Prove that if every $\mathbb{Z}$-module homomorphism $f$ from $A$ to $M$ lifts to a $\mathbb{Z}$-module homomorphism $F$ from $B$ to $M$ with $f = F \circ \psi$, then every $R$-module homomorphism $f'$ from $A$ to $\text{Hom}_\mathbb{Z}(R, M)$ lifts to an $R$-module homomorphism $F'$ from $B$ to $\text{Hom}_\mathbb{Z}(R, M)$ with $f' = F' \circ \psi$. [Given $f'$, show that $f(a) = f'(a)(1_R)$ defines a $\mathbb{Z}$-module homomorphism of $A$ to $M$. If $F$ is the associated lift of $f$ to $B$, show that $F'((b)(r) = F(rb)$ defines an $R$-module homomorphism from $B$ to $\text{Hom}_\mathbb{Z}(R, M)$ that lifts $f'$.]
(c) Prove that if $Q$ is an injective $\mathbb{Z}$-module then $\text{Hom}_\mathbb{Z}(R, Q)$ is an injective $R$-module.
