General Information (in no particular order)

- Open book: you can use your textbook but no notes; you still have to study.
- 7-8 questions: each may have parts so this really doesn’t tell you anything.
- Question types: short answer; true (prove) or false (prove or give example); compute something, usually part of a larger computation (requiring formula or knowledge of properties); derive something.
- Prepare using (1) class notes, (2) homework, (3) text, (4) other problems listed in the homework.
- I’ll be around most of the week. Call or e-mail me if you want to schedule a specific time to ask questions.

Options. You must choose one of the following options for your final. You can change your mind until Thursday morning May 3rd at 9AM. At that time whatever your last choice was will be your choice.

1. Comprehensive Final. Covers all the material from this course. Counts as 30% of your final grade. If your score on this final exceeds your score on the midterm, I’ll count your final as 40% of your final grade and the midterm as 10%.

2. Second Midterm. Covers only the material since the midterm. Counts as 25% of your final grade; midterm will also count as 25%.

3. Bail Test. It doesn’t really matter what it covers because you don’t take it. You get 0 points on the final and you fail the class.

I, ____________________________, being of tired mind and body, yet still capable of understanding the consequences of my choice, choose for my final, option:

- 1
- 2
- 3
